Who picks well

The book's implied hit rate is what the odds say should happen. Actual is what did. Beating your implied rate means you're finding value; taking long shots is fine if you cash them.

Risk appetite

Name	Avg implied	Actual	Edge	Risk rank
Dad	52%	50%	-2 pts	1 of 4 (biggest swings)
Matt	52%	67%	+15 pts	2 of 4
Dan	52%	50%	-2 pts	3 of 4
Nick	53%	75%	+22 pts	4 of 4

Lower implied probability means longer odds. Edge is actual minus implied, in percentage points.

Awards

MVP: longest-odds leg that hit. **Blown Layup**: safest-odds leg that missed. **Sole anchor**: the only miss in a losing week.
